

I am an XM subscriber and have enjoyed having the convenience of local traffic and weather available to me as part of my subscription to the XM service. It has been brought to my attention that the National Association of Broadcasters is trying to take this service away(NAB's petition 04-160) , and I respectfully protest that this not be done. Let us as consumers decide whose service we prefer instead of decisions being made for us by those who really don't have our interests as the driving force behind their position.
